SUMMARY With the new Markup Import and Markup Assist tool and additional object filters, you can quickly add and incorporate feedback from printed paper or PDFs to your drawings. When you can't design on paper, you can often import a hand-drawn picture or document, such as a SketchUp drawing or PDF, to your AutoCAD drawing, and use it to send feedback. The new Markup Import and Markup Assist tool makes this simple by taking the image's text and importing it into the current drawing. The tool takes care of spacing, colors, shadows, and color fills to add the image to your drawing. You can then refine the image and mark it up as you see fit. You can choose a single image or group of images and import them to your drawing, and also import groups of words to an image. In addition, the Markup Import and Markup Assist tool lets you open, edit, and manipulate images with other features and tools. The new Filters feature lets you restrict which elements in a drawing can be affected by the markups in a particular drawing. The filters can be applied in a variety of ways. For example, you can apply filters to specific drawing layers, layers that have a certain tag, layers with a particular annotation, or layers where a text annotation has been applied. You can also apply filters to all objects in a drawing. For example, you can restrict which drawing elements can be moved or resized by certain elements or annotations, or which objects can be tagged with the same tag. You can filter on all objects in the current drawing, or filter on only objects that are part of a group. You can also filter on all drawing objects in all open drawings, or filter on all objects in all open drawings except for objects in the current drawing. The Markup Import and Markup Assist tool also lets you import hand
