### What's New in the?

Get even more out of AutoCAD 2D and 3D than before with increased automation and more powerful, customizable commands. Access remote drawing information in real time. (video: 1:14 min.) The new Subscribed Smart Set option allows you to access the most commonly used Smart Sets, which are now stored and updated automatically. You can now create your own Smart Set, or import a third-party Smart Set that is no longer available on the market. Every drawing now has a Smart Coordinates toolbox. In the latest release, the drawing tools are as effective as ever. You can also set custom toolbars and create a macro. Create 3D models and set up complex coordinate systems for more efficient 2D and 3D drawing and editing. (video: 5:19 min.) Experience even more advanced functionality in your CAD systems. Autodesk's new A360 initiative is designed to help you find, understand and manage access to your 3D content. (video: 1:32 min.) Managing content and collaborating with others is made easier and more efficient. (video: 4:09 min.) Timeline & Mix: Simplify the process of creating timelines by making it easier to combine layers of content. You can now quickly combine a sequence of linked layers to create a timeline. Quickly insert alternate views into the timeline with Mix. For those who create content in a 3D environment, you can now create dynamic master pages to easily switch between multiple views of the same element. Auditing & Security: Gain full control over users and permissions with the new-and-improved Security Center. Additional reporting features are now available to detect if changes have been made to your drawings since the last time you accessed them. The new camera history report helps you find and resolve drawing errors in the fastest way. Extra Things: Smart guides are now more intuitive and easier to use. A new tool that is commonly used by people who do CAD work, the Tablet marker tool, is now much easier to use. The palette is now a separate window that you can customize to your heart's content. Scenarios: Save time, increase productivity, and engage in more collaboration with AutoCAD scenarios. You can now automatically import an entire folder of drawings to be
