'QuickView' enables you to browse frequently-used applications and files and save them to their favorites If you work with Windows for a long time, it is always annoying to search through folders, subfolders and files in order to locate something you need. This application makes it more difficult for you to find the desired files and apps by enabling you to scan through files and folders from a list. The interesting fact is that once all the results are found, you will have the possibility to open the locations, either directly or through tabs. You will get the ability to add favorites through a simple process. It is a very easy process to watch a video on the Internet and see whether you are going to like it. During the last few years, it became much simpler for people to watch online streaming videos on TV sets instead of settling for watching them in the living room. YouTube on your PC or Mac The main feature of this PC program is related to the YouTube website. You can download the application with just a click from our servers and it will be stored in a folder on your hard drive. Once done, a new window will pop up where you can enter a YouTube video to be analyzed and chosen. You will have the opportunity to open the location where it will be stored on your hard drive, using one of the available options. You will be able to browse through the videos you have there in the main window and you will have the possibility to enter its title, the number of views, length and author.
