TrueCrypt is a free disk encryption program that people use to hide all kinds of things on their hard drives. Here's what's weird about it: the popularity. Why would anyone want to hide something so personal and sensitive? Because it's free and easy to use. And it's amazingly powerful. Key features Advanced Encryption Standard (AES) technology. Not only does AES protect your documents (and anything else you put on your hard drive), but it also allows you to encrypt regular files and folders. No matter where you put them. File recovery. If your hard drive crashes or you corrupt it somehow, you can recover your data using TrueCrypt. Drag-and-drop support for encrypted volumes. Just drag files into a container to encrypt them. Plenty of options. You can choose to encrypt individual folders or individual files, encrypt using a passphrase, or create automatic snapshots of your encrypted volumes. Encrypt entire partitions. Thanks to technology called the Advanced File System, you can encrypt an entire partition, hiding everything you put on it. Customizable and secure. You can change the size of the container and create a new one when you need one, and change the password for your volume anytime you want to. External support. If you lose your password, all you need is the file you generated the password from, a password file that you have placed on a USB drive, a blank CD/DVD, or a piece of paper. Protect a partition. If you want to encrypt a partition (including all the data on it), you can create a container on your computer, select the partition to protect, and apply the AES encryption immediately. (This is called "fast startup.") Encrypt a file or directory. You can encrypt individual files and directories, or an entire drive. You can encrypt text files and even password-protected ZIP archives. You can create an encrypted volume using a password (you type it in when you start the program). What is TrueCrypt? TrueCrypt, a program from J.P. Andresen and the TrueCrypt Team, can encrypt all kinds of data. It's so powerful, it could be called a disk encryption program. But
