GoLite 2022 [New]

Create database from XSD/XML files
Validate an XML schema against an XSD file
Make a query against a database and get the results
Execute an SQL statement against a database and get the results
Import, export, view or change a database
Generate SQL statements for creating, altering or deleting databases
Make changes to the database without actually editing it
Import data to a new database
Export data from a new database
Change the database
Execute a script against a database
Make a backup of a database
Change settings of a database
Recreate a database from scratch

How to install: Install the latest version of goLite from its repository. You can also install older versions from the project page. If you want to install the latest version via MacPorts/Fink/Portage then first install goconda.

How to get started: Start goLite. Go to File->New Database, or open a database file (.db). Edit a database. Or open the SQLite Editor, which should be in the Application folder of goLite. Run queries in the SQLite Editor, or at the command line.

How to create a database: At the File->New Database menu, select Create database from an XSD, or Select a file. Select the directory containing the.xsd file, which should be in the Application folder of goLite. Select the XSD file to use for validation. Select a name for the new database. Create the new database.

How to edit a database: At the File->New Database menu, select Edit database from an XML file. Select the directory containing the.xsd file, which should be in the Application folder of goLite. Select the XML file to use for validation. Select a name for the new database. Select the database to open. Edit the database.

How to open a database: At the File->Open menu, select Open database from an XSD, or Select a file. Select the directory containing the.xsd file, which should be in the Application folder of goLite. Select the XSD file to use for validation. Select a name for the new database. Select the database to open.

How to view a database: At the File->Open menu, select Open database
